

Full Stack MERN Bootcamp

Session 1 – Introduction to HTML

Start Slide

Tuesday | 90 minutes

Bootcamp Overview

01

Build full-stack apps using MERN (MongoDB, Express, React, Node.js).

02

Schedule

- 9 weeks
- 2 live sessions/week + Q&A + check-ins

03

Methodology: Agile mini-sprints

04

Tools

- **Notion:** All course material
- **WhatsApp Group:** Chat + quick questions
- **Notion Task:** Weekly goal tracking
- **GitHub:** Code sharing & collaboration

< Coding is a journey — stuck moments = learning opportunities />

What is Web ?

How frontend and backend work together?

CODE WITH GHINA

Types of Web Development

Front-End Development

This is the part of the website that users interact with directly the visuals, layout, and navigation.

Back-End Development

While the front-end is what users see, the back-end is what makes everything work behind the scenes.

Full-Stack Development

Full-stack developers have expertise in both front-end and back-end development. They can build entire web applications from start to finish.

MERN Stack

M

MongoDB

NoSQL, document-oriented database. It stores data in flexible which makes it ideal for working with modern web applications. It's used to store and retrieve application data such as users, posts, or settings.

E

Express

flexible Node.js web application framework. It simplifies backend development by providing built-in tools to handle routing, APIs, and HTTP requests/responses. It helps structure the backend code clearly and efficiently.

R

React

modern JavaScript library used to build user interfaces. It allows developers to create dynamic, reusable components and handle user interactions efficiently in the browser.

N

Node.js

JavaScript runtime environment for building scalable server-side applications. It enables backend development using JavaScript, handling tasks like connecting to databases, and running logic.

MERN Stack

HTML: Foundation of the Web

HyperText Markup Language

HTML5 provides the basic structure and content of web pages such as headings, paragraphs, images, links
- Skeleton of page

01

<!DOCTYPE html>

It's a declaration, not a tag.
Tells browser: "This is an HTML5 document."

02

Tags

Tags are written inside angle brackets:

- `<p>` is the opening tag
- `</p>` is the closing tag

What These Tags Mean

`<header>`

`<p>`

`<a>`

`<footer>`

`<nav>`

`<form>`

`<button>`

`<img>`

`<h2>`

`<ol>`

`<table>`

`<section>`

`<link>`

`<input>`

`<head>`

Questions?
