CSS

CSS stands for **Cascading Style Sheets**. It controls how HTML elements look on the page like colors, spacing, fonts, and layout.

MAIN METHODS TO APPLY CSS

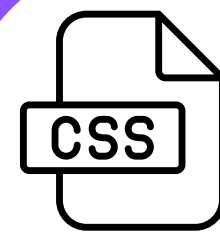

01

Inline CSS

```
<p style="color: blue;">This is blue text</p>
```

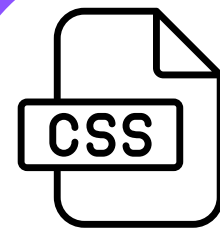

02

Internal CSS

```
<head>
  <style>
    h1 {
      color: green; }
  </style>
</head>
```

03

External CSS

```
<link rel="stylesheet" href="styles.css">
```

TYPES OF SELECTORS

01

Element Selector

Targets all elements of a specific type
(h1, p , div)

```
p {  
  color: blue;  
  font-size: 18px;  
}
```

02

Class Selector

Targets elements with a specific class. You can reuse a class on many elements.
Use dot (.) before class name

```
.card {  
  background-color: red;  
}
```

03

ID Selector

Targets one unique element with a specific ID.
Use a hash (#) before the ID name.

```
#main-title {  
  font-size: 32px;  
  color: green;  
}
```

HEX CODE FORMAT (#RRGGBB OR #RGB)

HEX codes are hexadecimal values that tell the browser exactly how much Red, Green, and Blue to show.

#RRGGBB

RR = Red (00 to FF)

GG = Green (00 to FF)

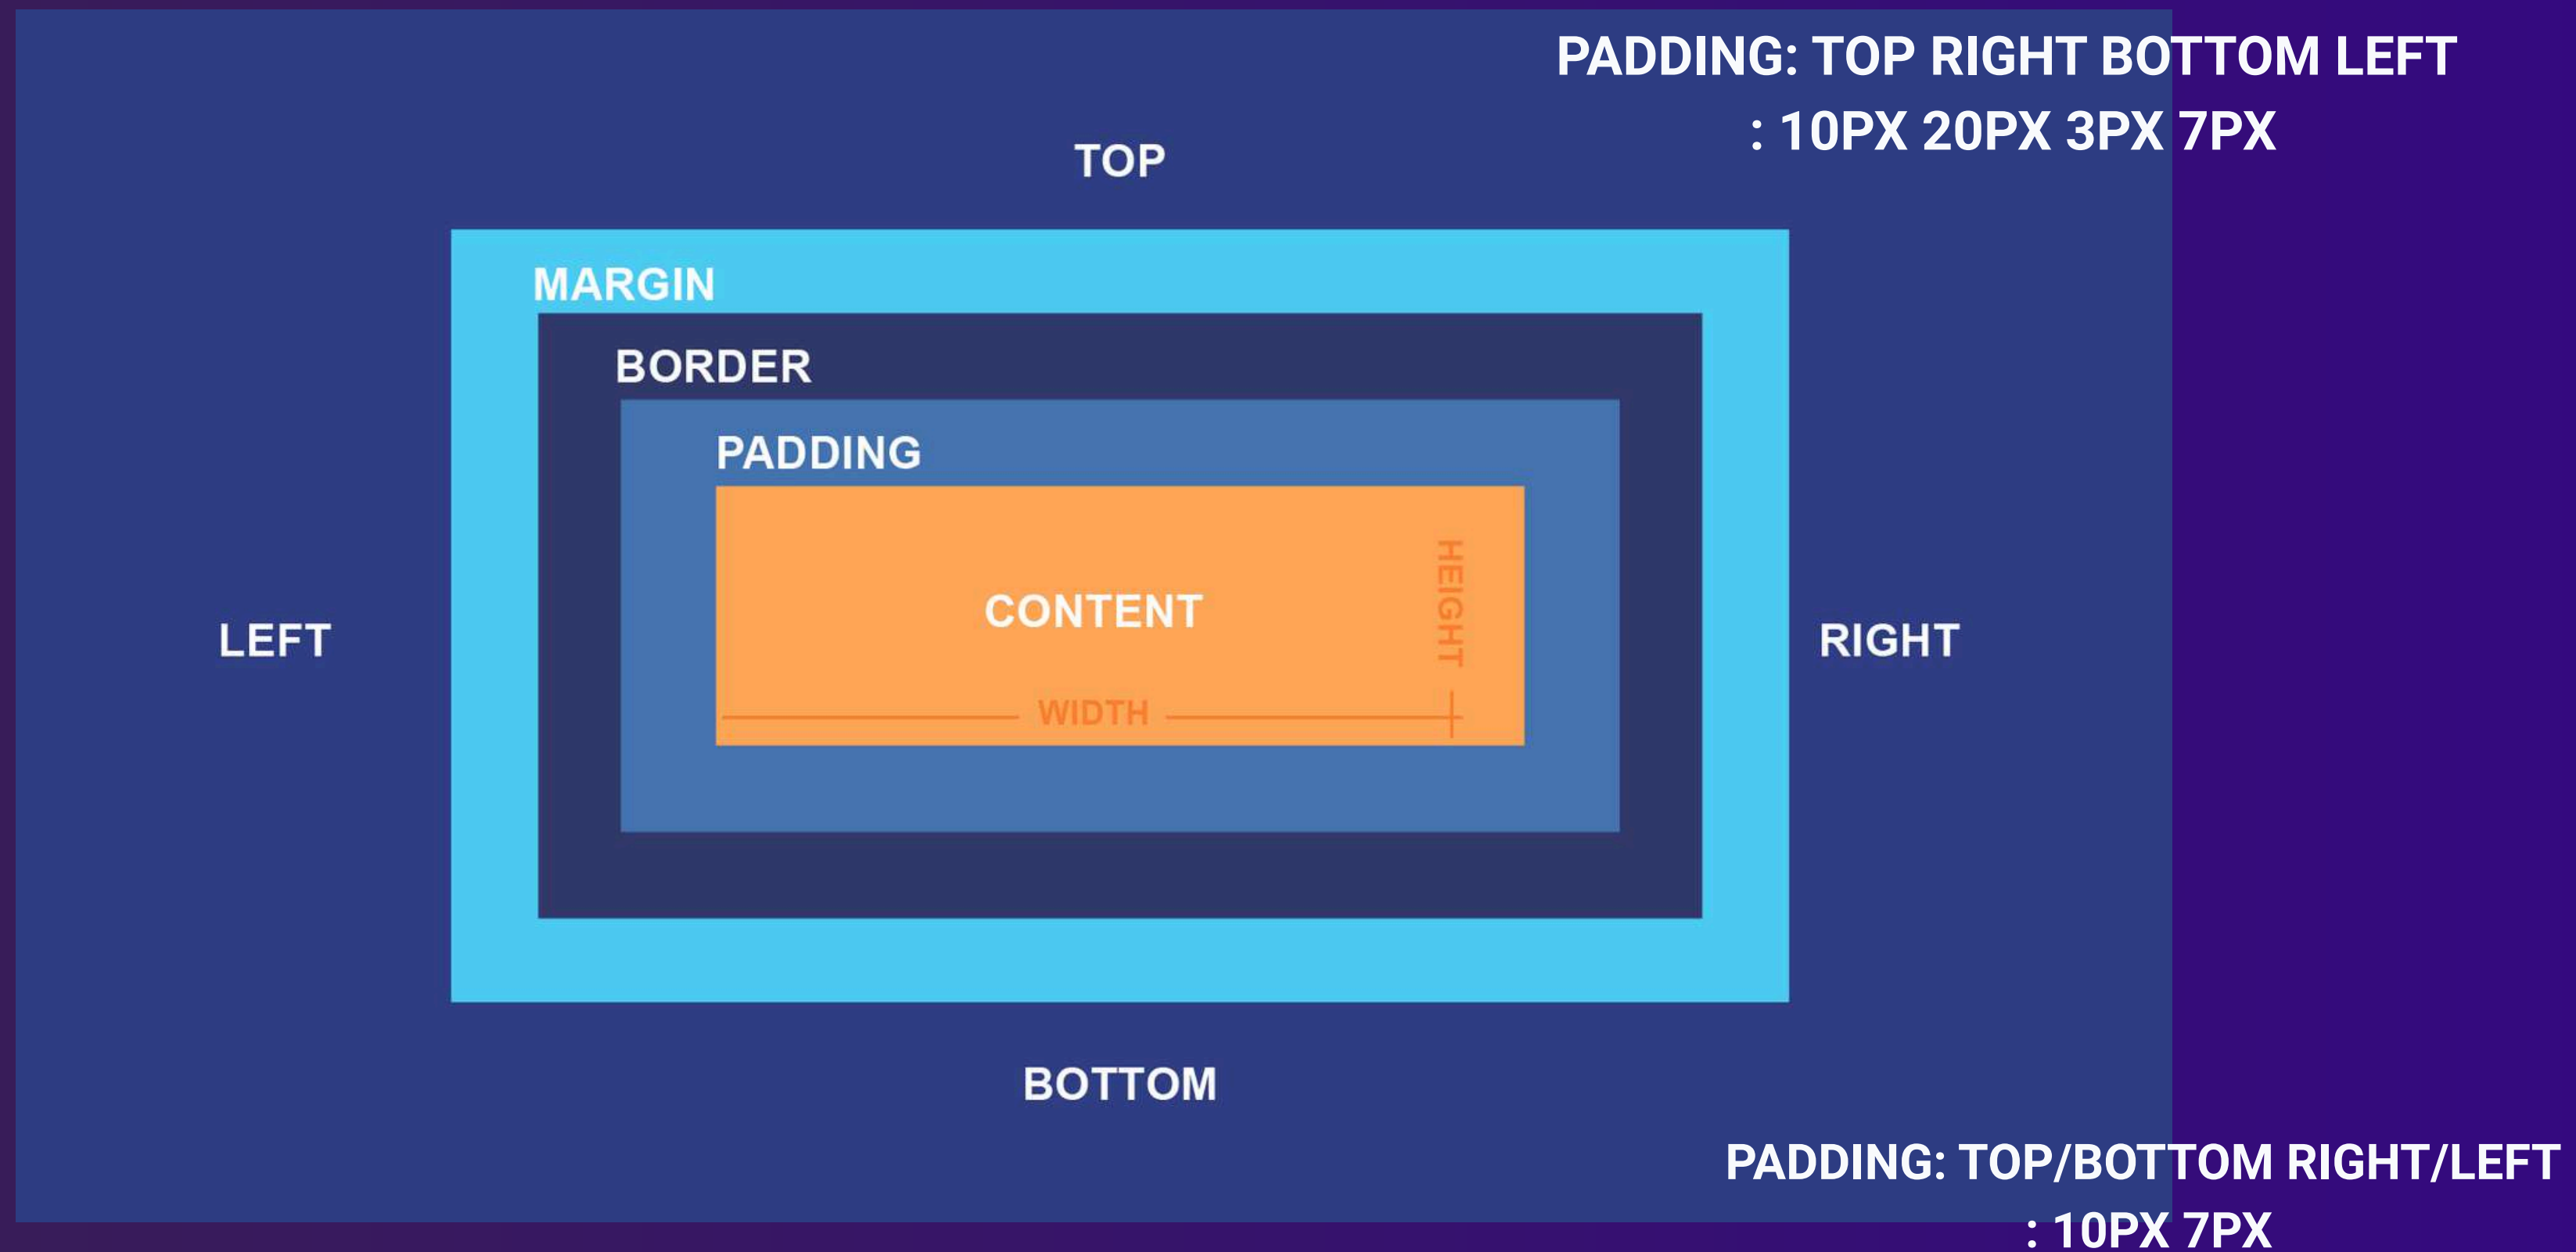

BB = Blue (00 to FF)

Each pair is in base-16 (hex),

00 = 0 (no intensity)

FF = 255 (full intensity)

BOX MODEL VISUAL

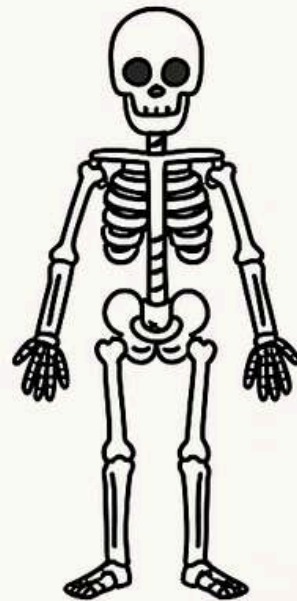

INTRODUCTION TO JAVASCRIPT

JavaScript usually works together with HTML and CSS — it reads data from your HTML (like forms, buttons, links) and controls how your page behaves when users interact with it. JavaScript adds logic, interactivity, and dynamic behavior to websites.

What makes up a webpage?

HTML

structure
(skeleton)

CSS

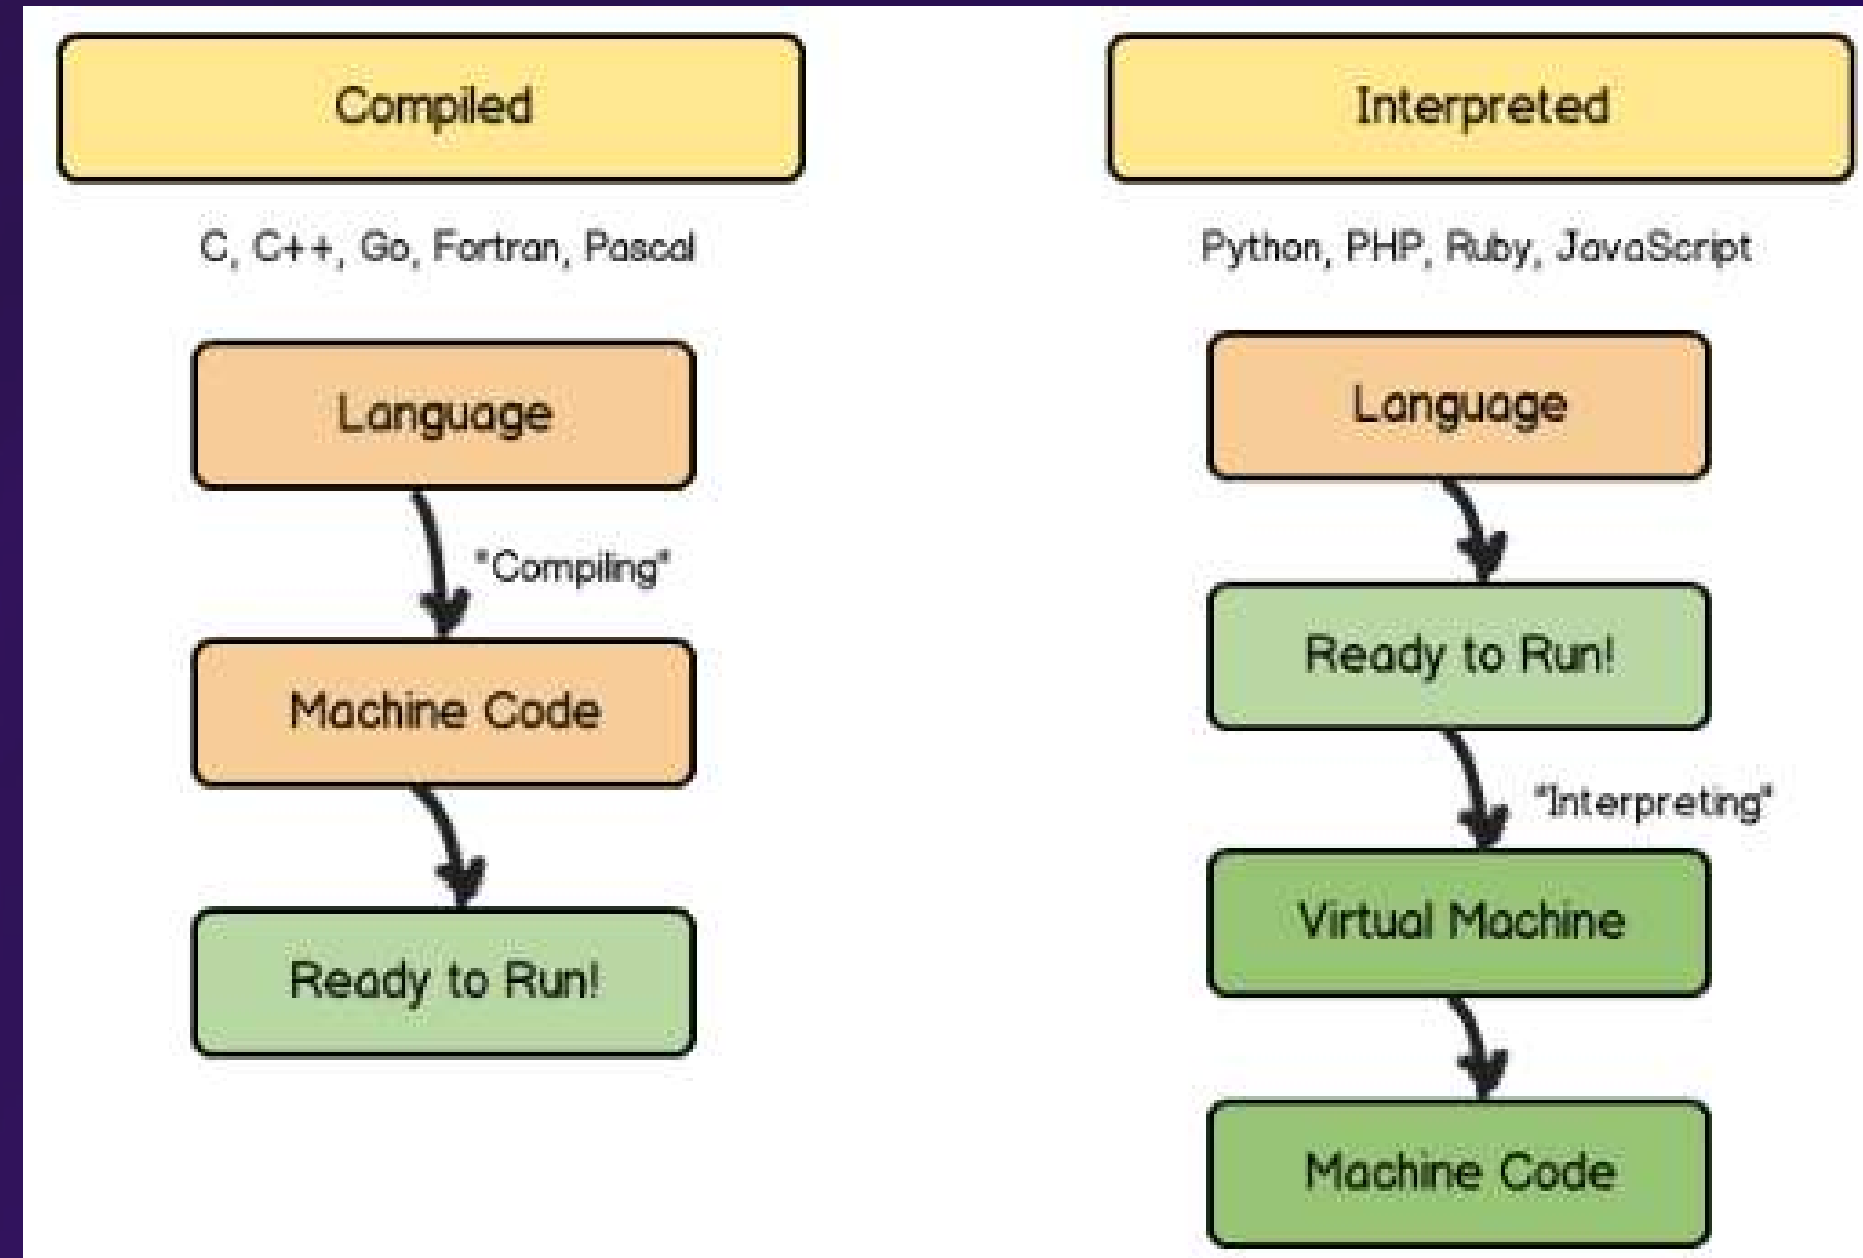

style
(clothes)

logic
(brain)

IS JS COMPILED OR INTERPRETED?

JavaScript usually works together with HTML and CSS — it reads data from your HTML (like forms, buttons, links) and controls how your page behaves when users interact with it. JavaScript adds logic, interactivity, and dynamic behavior to websites.

Questions?
